Key Competencies

- **Programming Languages:** C++, C#, JavaScript, TypeScript, Dart, Python, SQL
- **Frame-Workes:** ExpressJs, NestJs, FastAPI, Angular, REACT, Flutter, Flask
- **Databases:** SQL (Microsoft SQL Server, MySQL, PostgreSQL), NoSQL(MongoDb), Redis
- **Tools & Deployment:** Git, GitHub, Docker, Kubernetes
- **Security:** OAuth 2.0, JWT, OWASP, eWAPT, eJPT
- **UI/UX:** Adobe XD, Figma, Photoshop, Illustrator
- **Problem-Solving:**
- **Soft Skills:** [Problem-Solving & Decision-Making Skills](#), [Communication Skills](#)
- **Languages:** Arabic (Native), English (Fluent), German (Intermediate)

Education

ITI - Information Technology Institute

- 9M Software Development Mobile & Web Development Cross-platform Track

NTI - National Telecommunication Institute

- MEAN-Stack and Full-Web Application Developer

Al-Azhar University Cairo

Profile

- **Who I am:** An innovative Full-Stack and Cross-Platform Developer backed by rigorous training from top-tier technical institutes (ITI and NTI). I bring a strong analytical mindset and advanced problem-solving capabilities to modern software engineering.
- **My approach:** I focus on delivering high performance solutions by writing clean, maintainable code. By combining efficient architectural patterns, I ensure that complex systems are both robust and scalable.

Freelance Projects

Ahdalbaraka Limited

Full-Stack Web-App Platform — 2026

A comprehensive digital logistics and business services platform facilitating international shipping, machinery marketplaces, and SME project management.

- **Frontend:** React, Vite, TypeScript, Tailwind CSS, Zustand (State Management), TanStack Query, Recharts.
- **Backend & Logic:** NestJS Framework, Prisma ORM, RESTful APIs, JWT, Passport (Authentication), Winston (Logging).
- **Database:** PostgreSQL.
- **Key Architecture:** Developed an end-to-end modular system utilizing an enterprise-grade backend structure, secured authentication pipelines, and interactive data visualization charts.

Baraka-Partners

Full-Stack Web-App Platform — 2026

A Dynamic Admin Dashboard & Landing Page dual-component system featuring a high-conversion landing page and a robust management panel for real-time content updates.

- **Frontend:** Angular, Tailwind CSS, Dynamic Forms, Responsive UI.
- **Backend & Logic:** Node.js, Express.js, RESTful API, CMS Logic, CRUD Operations.
- **Key Architecture:** Engineered a modular Content Management System (CMS) enabling dynamic content updates through tailored RESTful middlewares and a fully responsive, data-driven client dashboard.

Projects

GraphQL Social Media API with WS Redis Caching and S3 Storage

Back-end Application

Backend & Logic: Node.js, Typescript, Express, Web Sockets, Apollo Server v4

Client: Angular (under Development)

Database: MongoDB (Mongoose)

Caching: Redis

Files & Assets: AWS SDK v3

```
[ Angular Client ]
  |
  (GraphQL / WSS)
  v
[ Node/Apollo Server ] --(Pub/Sub)--> [ Redis Cache ]
  |
  (Mongoose / AWS SDK)
  v
[ MongoDB & MinIO(S3) ]
```

[Video Code](#)

E-commerce App

Cross-Platform Application — Flutter, Express, MongoDB

Tech Stack: Flutter

Backend: Node.js, Express.js, JWT, OAuth V2.0, REST APIs.

Database: MongoDB .

Tools: Docker, Postman(Testing), Git, GitHub(Version Control).

Deployment: Dockerized backend, Atlas as cloud DB

[Video Download APK Code](#)

Social Media App

Web Application — MEAN Stack, WebSocket's

Frontend: Angular.

Backend: Node.js (TypeScript), Express.js, REST APIs, JWT.

Database: MongoDB (Mongoose), MongoDB Atlas (Cloud).

Deployment & Tools: Docker, Git, GitHub (Version Control), Postman (API Testing).

[Video Code](#)

E-Commerce Web App - NTI Project

Web Application — MEAN Stack

Full-Stack Development: Angular, Node.js (TypeScript), Express.js.

Authentication & Security: JWT, Google OAuth 2.0.

Database & ODM: MongoDB, Mongoose.

[Video Code](#)

Examination Management System

Web Application — React, Express, Sequelize, SQL Server, MySQL

Frontend: React, Tailwind CSS

Backend: Node.js, Express, Sequelize ORM.

Database: Microsoft SQL Server.

Tools: Sql Management Studio CE, Docker, Apidog (Testing), Git, GitHub (Version Control).

Deployment: railway Platform (hosting), MySQL Workbench CE (Migration Wizard from mssql to MySQL)

[Video Code](#)

Movie Ticket Booking System

Terminal App — C++, OOP, File I/O

- Developed a robust console-based ticketing platform using **C++**, applying **Object-Oriented Programming (OOP)** principles to manage modular and reusable code components.
- Architected a dual-role system (Admin and Customer) featuring dynamic showtime management, seat selection logic, and real-time availability tracking.
- Implemented persistent data storage using **File I/O** streams to manage user records, movie databases, and booking transactions effectively.

[Video Code](#)

Examination Management System

Desktop Application — C#, ADO.NET, MSSQL

- Developed an examination system using **C# WinForms** for an intuitive user interface and **ADO.NET - Local Microsoft SQL Server** for reliable data persistence.
- Engineered a tiered architecture to separate business logic from UI, ensuring system modularity and maintainability.
- Implemented complex SQL queries and stored procedures to handle high-volume question banks, result generation, and student performance tracking.

[Video Code](#)

Hotel Management System

Desktop App — C#, .NET, EF Core, SQL Server

- Developed a comprehensive desktop application for hotel booking and operations using **C# WinForms** with a modern Metro UI design.
- Engineered a tiered system architecture to ensure a clear separation between the UI layer, business logic, and data access layer.
- Successfully refactored the data access layer by migrating from **ADO.NET** to **Entity Framework (EF) Core**, significantly improving code maintainability and development efficiency.
